EDUCATION

BA Hons in Philosophy (2:1)
Post Graduate Diploma in Computing
MSc in Multimedia Computing

OVERVIEW

Versatile and productive software developer specialising in web applications with Ruby on Rails and Java Script.

Twenty five years' commercial experience as an analyst/programmer across a broad range of organisations.

Participated in about fifty projects involving user-centred database applications, which used numerous languages, methodologies, idioms, toolkits and frameworks - mainly in development but also in analysis and support.

Have worked in diverse application areas which include banking, leisure, e-retailing, billing, stock control, accountancy, housing, slot booking, payroll, portals, messaging, and software engineering.

Knowledge of object-oriented analysis and design, MVC, Agile, TDD/BDD, applying design patterns (Go4) & principles (SOLID), OR mapping & domain model design, UML, version control, internet protocols, basic site design, support (problem determination, impact assessment & non-invasive fixes), web server installations, prototyping, refactoring, legacy system interfacing and project documentation.

Ability to write tight tidy modular OO code, to quickly sight-read an application's source and to break requirements down into DRY decoupled steps.

TECHNICAL SKILLS

Ruby	10 years	Rails, the standard library, and many of the widely-used gems, for instance: RSpec, Minitest, Factory Girl, Faker, Capybara, Nokogiri, Devise, Devise Invitable, HAML, Can Can, AWS-S3, Resque, Paperclip, Couchbase, LDAP, Octopus, Kaminari, Will Paginate, Draper, Cucumber, various Bootstrap helpers, Geokit, Mechanize, Simple Form, Nested Form, Heroku, Red Hat Cloud, and Twitter.
Internet	15 years	Java Script (jQuery, jQuery UI, Coffee Script, React), HTML, CSS, Twitter Bootstrap, POP/IMAP, SMTP, SOAP
SQL	15 years	PostgreSQL, MySQL, Oracle, Sybase, SQL Server, SQLite, normalisation, schema design
Unix	15 years	Linux & Solaris, (also HP-UX, BSD, AIX), shell scripting, system installation & maintenance (intermediate level - mostly a user)
Languages		PHP (3 years), Java (3 years), Perl (6 years), C++ (5 years), C (7 years), MUMPS

COMPUTING EXPERIENCE

Various
2017-2018

- https://github.com/srycyk/templet_rails A framework that encourages a more object oriented approach to writing view markup in Rails. It's a replacement for ERb scripts, and the like, providing *out-of-the-box* behaviour that can be easily altered. It's the most recent example of my coding.
- <http://niads.co.uk> An attempt to broaden my options by becoming self-employed. To promote this venture, I've written a scraper to find potential clients by extracting data starting from business directory sites.
- <https://github.com/srycyk/mine> A multi-featured web page scraping framework built from scratch. It's quite intricate inside, but exposes a simple top level interface that cuts down the retrieval of a set of related pages into no more than a few lines of code.
- <https://github.com/srycyk/visitor> A small standard Rails site to bookmark URL's. It has nested tagging, imports & exports, and DRY'ed up views.
- <https://github.com/srycyk/radio>. A rough, but ready, site that lists BBC radio programmes. It has a Rails back-end and a React front-end. I wrote it mainly to practise React, but I do use it myself.
- Short-term freelancing jobs in education and GDPR compliance using Rails.

FMA,
Boulder,
Colorado,
USA
2015-2016

- Development for a property information service provider, First Movers, using Rails, Bootstrap, jQuery, and Mysql, with Github, Pivotal Tracker, and Semaphore.
- Rewrite of an administrative website to manage customer services, including geo-location searches, user enrollment, credit card registration & charging (with Authorize.net), invoicing, API accessing, and data distribution.
- Enhancements to <http://proxyrain.com>, a IP address balancing proxy service, and minor changes to an account management site for clients' private use.

Arrk
(National
Union of
Students),
Manchester
2014-2015
(Contract)

- Development for an award winning responsive site, unioncloud.org, serving 80 unions with very many thousands of students in each. Every union has its own subdomain, for example, Manchester University is umsu.unioncloud.org and Sheffield starts with *ssu*.
- Produced decoupled modules for the mass registration of students, receiving data (as CSV and JSON) via HTTP API's and an FTP drop-in.
- Wrote a module to collect and distribute credit-card transaction data to third-party systems.
- Additions to an event booking and ticket redemption module.
- Synchronising data with an external loyalty points system, sending periodic email notifications of points accrued from on-line purchases.
- Gathering statistical data for marketing analysis to target specific audiences.
- Performance tuning, bug fixing, VM (Cent OS) Zen Desk, New Relic, Postgresql configuration, and preparation for merchandise data imports.

Freelancing

- Developed an email-based app, for estateagencyallstars.co.uk, that receives, reconciles and delivers emails (to estate

- 2014**
- agents) from job applications (consisting of a CV, psychometric test and video presentation) by aspiring estate agents.
 - Developed a web-based thesaurus showing metaphors and referential information, for Rowdy Labs, USA.
 - Prepared course material introducing authentication in Rails, for gotealeaf.com.
 - Developed a prototype CRUD-based Rails app for a clothing inventory in a US warehouse.
- Security
Icon, London
2013-2014
(Contract)**
- Analysis and development of an administrative dashboard (in Rails) which interfaces with credit card payment gateways. The UI provides extensive search capabilities, detects misuse, compiles statistics on card transactions, creates tiered accounts by invitation (Devise) and also uses a Bootstrap template for a pleasing design.
 - Synchronising Couchbase & SQL data-bases, querying Couchbase, realistic data generation, graph drawing using the RGraph JS library, role-based access authorisation, API compatibility, Ubuntu system configuration and deployments.
- Self-Employed
2012-2013**
- Short-term freelancing projects which included an application for registering parcel deliveries, data-base population (from JSON to normalised SQL), time-slot reservations, web-page scraping, and the development of a skeletal Rails application (for wire-framing) using custom generators, Inherited Resources, generic templates, Devise and Twitter Bootstrap 3.
 - Worked on <http://runabook.co.uk> which is a pooled betting game for groups of friends to bet on any upcoming sporting fixtures, but it didn't prove popular. It's in Rails and deployed on Heroku, it has 15K lines of code. Wrote a set of Ruby scripts using the Twitter API to target potential users of this game.
 - Also developed, github.com/srvcyk/thesaurus. - two one-page thesaurus app's, one in Rails, the other in React. It has one of the largest vocabularies available, as it's an amalgamation of Roget, WordNet, and another thesaurus. It was online at <http://thesaurus-lexdump.rhcloud.com>, but no longer.
- Scientific
Analysis
Laboratories,
Manchester
2011-2012
(Contract)**
- Ruby on Rails development using Mysql and Oracle, with Passenger deployments.
 - Developed a quotation and invoicing sub-system to track work-in-progress for chemical and particulate analysis of building sites. It permits authorised users to enter quotes, sales orders & chargeable items, and it produces quotation and invoice documents that are sent to the client. Amendments for fine-grained access restriction (Can Can), and the allocation of differing role sets for users per company branch.
 - Wrote an application to schedule itineraries for the collection and delivery of consignments from clients' sites. It provides a web-based front-end for on-road drivers to use, as well as a fallback of delivering SMS texts to give notice of route changes.
 - Database conversions and imports.
 - Enhancements to a web application to measure the ash, moisture and density of chemical samples.
- Objective
Websites
2008-2010
(Freelancing)**
- Started a business as a sole-trader offering software development services. Prepared a business plan and received a regional aid grant.
 - Learnt Ruby on Rails, by developing a site to retrieve store and search RSS feeds classified by tags, a Rails 3 Engine which allows end users to answer multiple choice questions, a general purpose price-comparison application, an email distributor and web scrapers to find leads.
 - Developed a site to share sheet music in PHP.
- 1988 - 2008
(Various)**
- Contracts and permanent positions in finance (stock trading & options), health-care, education, CMS development, email handling, warehousing and retailing.
 - Coding, analysis, software distribution, release management and data-base administration.
 - BT (Ipswich), Misys (Birmingham), Isoft (Manchester), Tridion (Holland), Sportal (London), BSKyB (London), Commerzbank (Germany), Nat West (Bristol), Newton Investment (London), Datel-Ferranti (Preston), NHL (USA), Hoskyns (Southampton), EDS (Birmingham), AT&T (Redditch), NHS (nationwide), German Health Service, etc..
